

QA (Manual and Automation) Bhupendra Patidar(+91-8878982889)

Over 8+ years of Expertise: Extensive experience in both manual and automation testing, ensuring high-quality software delivery across **Web, Mobile, and API-based applications**.

Proficient in Test Automation Tools: Expertise in developing and maintaining automated test scripts using industry-standard tools such as **Playwright, Selenium, NUnit, TestNG, Cucumber, Specflow**.

Strong Manual Testing Skills: Comprehensive experience in manual testing, including **functional, regression, exploratory, and usability testing**. Adept at identifying edge cases, reproducing complex bugs, and ensuring comprehensive test coverage.

Test Planning and Execution: Skilled in designing detailed **test plans, test cases, and test scripts for manual testing**, ensuring thorough test coverage and adherence to project requirements. Able to prioritize testing efforts based on risk and business impact.

User Acceptance Testing (UAT): Experienced in coordinating and executing UAT sessions, gathering feedback from stakeholders, and ensuring that software meets business requirements and user expectations.

Defect Tracking and Reporting: Proficient in using tools like **JIRA, and Testrail** for tracking defects, reporting issues, and collaborating with development teams to resolve problems efficiently.

Strong Programming Skills: Solid understanding and practical application of programming languages including **TypeScript, Java, C#** to design and execute automated tests.

Continuous Integration/Continuous Deployment (CI/CD): Experienced in integrating automated tests into CI/CD pipelines using tools like **Jenkins, git and Azure Pipeline**.

API Testing Expertise: Skilled in both manual and automated API testing using **Postman, Playwright request, RestAssured, RestSharp**, ensuring comprehensive validation of backend services.

Agile Methodologies: Strong advocate of Agile practices, actively participating in Scrum ceremonies, and contributing to continuous improvement of testing processes.

Team Collaboration and Leadership: Effective communicator and team player, with experience mentoring junior testers, leading QA efforts, and collaborating with cross-functional teams to deliver high-quality software solutions.

Education and Experience

Master Of **Computer Application (MCA)** from **SGSITS** Indore with **7.0CGPA**.

Quality Assurance Analyst at Cognizant, Chennai from 2017 to 2018.

QA Automation Engineer at Cyber Infrastructure Indore, MP, Feb-18 – Nov-24

Sr. QA Automation Engineer at Datamatics Global Services Mumbai MH, Nov 24 - Present

Projects:

BUPA UK (Health Insurance) || Nov-24 to June 25 || Team

Technology : Selenium WebDriver, C#, NUnit, Azure board.

Platform: Windows, Chrome, Firefox, Edge

Description

BUPA UK Health Insurance is a healthcare insurance platform that provides digital services for managing health insurance policies, member registration, claims processing, and healthcare consultations. The application allows customers to manage insurance plans, submit claims, and access healthcare services online.

Responsibilities

- Perform Functional, Regression, and Exploratory Testing for web and desktop applications.
 - Design and execute manual test cases based on business requirements
 - Develop automation scripts using **Selenium WebDriver with C#**
 - Execute automated regression test suites using **NUnit framework**
 - Validate insurance workflows including policy management and claims process
 - Track and report defects using **Azure Board**
 - Collaborate with developers and business analysts to clarify requirements
 - Participate in Agile ceremonies including **Sprint Planning, Standups, and Retrospectives**
-

Atlas (Injury Prevention) || Feb-21 to Nov 24 || Individual

Technology: C#, SpecFlow, NUnit

Platform: Windows, Chrome, Firefox

Description

Atlas Injury Prevention Solutions helps organizations hire more effectively, prevent workplace injuries, and assist injured employees in returning to work quickly and efficiently.

Responsibilities

- Design and develop automated test scripts
 - Create and implement automation frameworks using SpecFlow and NUnit
 - Integrate automation tests with CI/CD pipelines
 - Collaborate with development teams to improve product quality
 - Maintain and update automated test suites
 - Analyze test results and report defects
 - Enhance test coverage through automation
 - Document automation processes and best practices
 - Monitor and improve automation efficiency
-

Manage America || Nov-20 to Feb-23 || Team

Technology : Java, Selenium WebDriver, TestNG

Platform : Windows, Chrome, Firefox, Internet Explorer

Description

Manage America is a property management platform used to manage and import property data through a streamlined data conversion process. It also provides comprehensive training and support tools for property management teams.

Responsibilities

- Design and execute manual test cases
- Create detailed test plans and test cases
- Perform functional, regression, and exploratory testing
- Develop automation scripts using Selenium WebDriver with Java
- Implement automation frameworks using TestNG

- Integrate automation scripts with CI/CD pipelines
-

Cooler Screen || Dec-19 to Mar-22 || Team

Technology : Manual Testing, API Testing, Postman, RestAssured

Platform : Windows, Postman

Description

Cooler Screen provides digital display screens installed in retail store refrigerators to show dynamic advertisements for beverages and other products.

Responsibilities

- Execute manual test cases for web applications
 - Perform API testing using Postman
 - Automate API tests using RestAssured
 - Report and track defects using JIRA
 - Validate API responses and backend functionality
-

Team Work || Feb-19 to Apr-21 || Team

Technology : Java, TestNG, Cucumber

Platform : Windows, Chrome, Firefox

Description

Teamwork is a customized web platform designed for managing employees, tasks, and organizational workflows.

Responsibilities

- Write detailed manual test cases
- Develop BDD automation framework using Cucumber and TestNG
- Implement automation scripts based on test scenarios
- Execute automation test suites and report defects

Hilo || Feb-18 to Jan-19 || Team

Technology : JavaScript, Manual Testing

Platform : Chrome, Firefox, Internet Explorer

Description

Hilo is a web-based application used for managing internal operations and services for business workflows.

Responsibilities

- Perform functional and usability testing
- Understand and analyze test scenarios
- Write and maintain test case scripts
- Execute test suites and identify defects
- Maintain and update existing test scripts

Declaration

I affirm that the above-mentioned information is correct and complete to the best of my knowledge.
